

DID YOU KNOW?

Breast cancer is the second leading cause of cancer death among all women and the leading cause of cancer death among Hispanic women.

WHAT IS BREAST CANCER?

Breast cancer is a medical condition that arises from the excessive growth of cells in the breast tissue, leading to abnormal growth.

WHAT IS BREAST CANCER SCREENING?

Breast cancer screening involves examining a woman's breasts for signs of cancer before any symptoms are present. It's important for women to talk to their healthcare provider about the best screening options for them.

Every woman should be informed about these options.

WHAT IS A MAMMOGRAM?

A mammogram is a type of X-ray that shows the inside of a woman's breast. Doctors use mammograms to check for any early signs of breast cancer. It's important to get regular mammograms as they are the best way for doctors to detect breast cancer early.

HOW IS BREAST CANCER DIAGNOSED?

Breast cancer diagnosis may require additional tests besides a mammogram. A woman may need to see a specialist who deals with breast health, like a breast specialist or surgeon.

ASK YOUR FTOC PROVIDER ABOUT GETTING A MAMMOGRAM!

EARLY DETECTION IS KEY
